

UL Listing of GracePorts® Expedites Their Use

All GracePorts® are now UL Listed under the category “Environmental-rated Accessories for Enclosures” (UL Category code FTTA). These new listings facilitate more efficient use and acceptance of these products. Customers, AHJs, and others involved in the selection, application, and installation of these products benefit from these new Listings.

The GracePort® MagView™ was the first UL Listed panel interface housing. Other listings of GracePort® products soon followed to provide Listing for the entire line of GracePort® products.

Like GracePESDs® (Permanent Electrical Safety Devices), GracePort® products now enjoy the benefits that come with UL Listing.

Previously, these products were certified by UL as Recognized Components under the category “Industrial Control Panels – Component” (UL Category code NITW2). This certification includes specific “Conditions of Acceptability” (as UL characterizes them) for these products that must be satisfied in the installation of the end-use product. UL Recognized Components are intended for use as components of complete equipment submitted for investigation rather than for separate installation in the field. The Listing of GracePort® products ensures they are suitable for field installation, where the only conditions that need to be satisfied are those found in the installation instructions provided with the product.

Listed GracePort® products lessen the customer's burden in the selection and installation process. There is no need to be concerned about satisfying conditions of acceptability. The customer only needs to select the product that satisfies their application and verify that the product is installed according to its installation instructions. Further review by UL to determine whether the product has been selected, applied, and installed properly is unnecessary. This includes the potential for a UL Field Evaluation.

Listed GracePort® products also provide for faster and more efficient AHJ approval of the end-use installation. As these products are suitable for field installation, they provide compliance with National Electrical Code (NEC) requirements, ensuring a code-compliant installation. When an AHJ finds the UL Listing Mark on a product, they have confidence in the UL's Mark, which assures them the product has been evaluated to the correct requirements and can be installed per the applicable requirements of the NEC.

The UL Listing for GracePorts® covers a fully customizable product with countless components, housings, and power options configurations.

The GracePort® UL Listing ensures seamless integration with existing certified equipment, simplifying compliance without updating the UL file for the customer's end-use product.
